Product Technical Summary

S2USB485

S2USB485DiagN2

N2 Bus Diagnostic Software

Overview

S2USB485DiagN2 is a Windows application that uses our S2USB485 device to perform basic diagnostic tests on your computer and N2 bus. This application is **Free** to our S2USB485 customers. You can download S2USB485DiagN2 from our website located at **http://www.s2innovations.com**

S2USB485DiagN2 performs the following diagnostic tests on your computer and N2 Bus:

- 1. Finds all attached S2USB485 devices and identifies what COM ports they reside upon.
- 2. Checks all found S2USB485 devices and checks to ensure that at least one (1) of the S2USB485 devices is COM port configured correctly for JCI's HVACPro.

3. Checks for Supervisory controllers on the N2 bus(es) which causes problems for JCI's HVACPro and JCI's FX CommPro applications.

4. With OBD capable S2USB485 devices (devices purchased after July 1, 2008), N2 Bus voltages are measured and displayed. Voltages that are out of range are indicated and possible faults are given.

Please note that you will need our S2USB485 device to use this software and that the latest drivers must be installed.

Specifications

Part Number: Supported Operating Systems: N2 Bus Interface Device(s) Supported: S2USB485DiagN2 Windows Vista, Windows XP, Windows 2000, XP, Win 98 S2USB485-JC-B S2USB485-JC-C S2USB485-JC-CB
